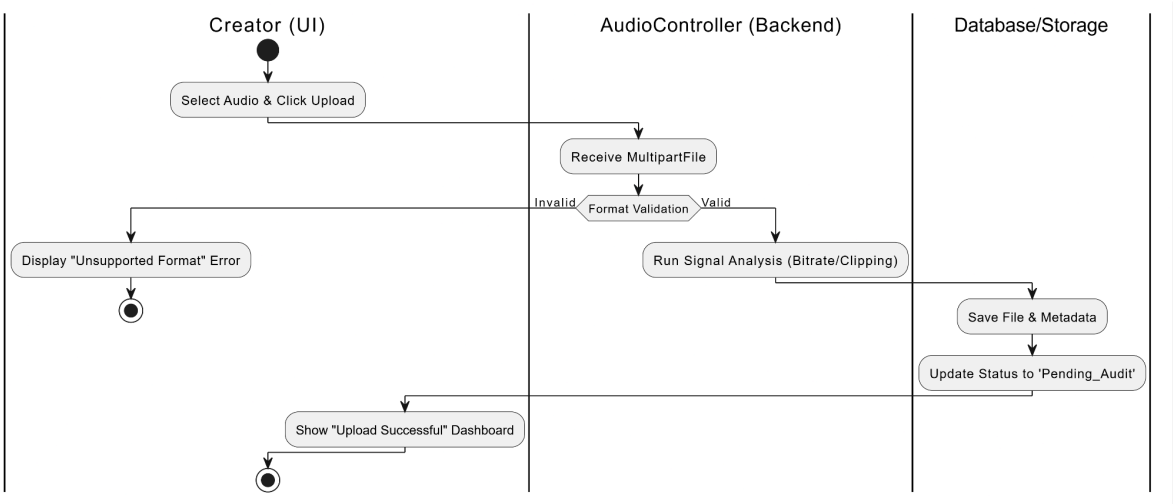
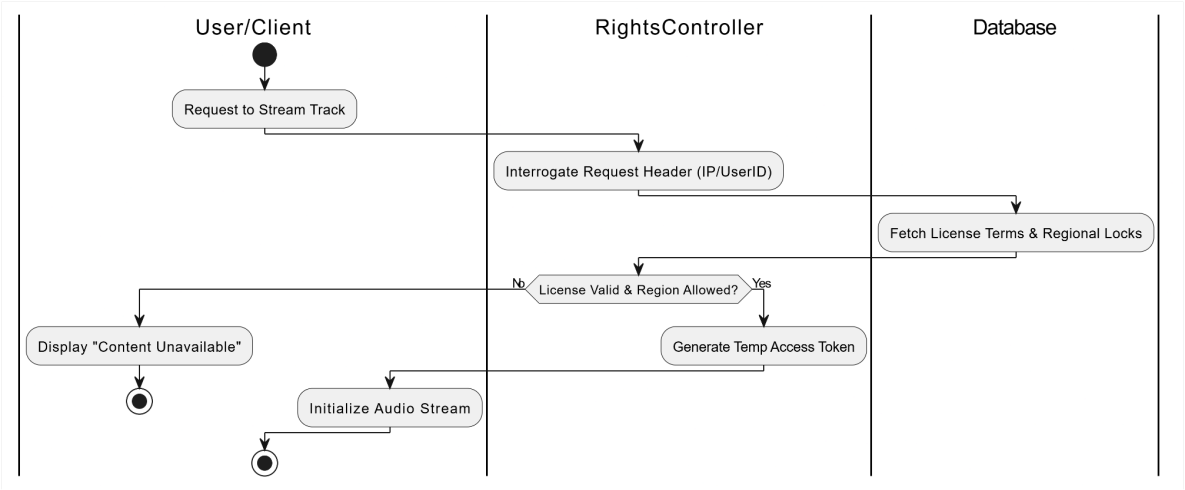
Activity 1: Audio Ingestion (Member 1)

Focus: The flow between the Creator, the Spring Controller, and the File System.



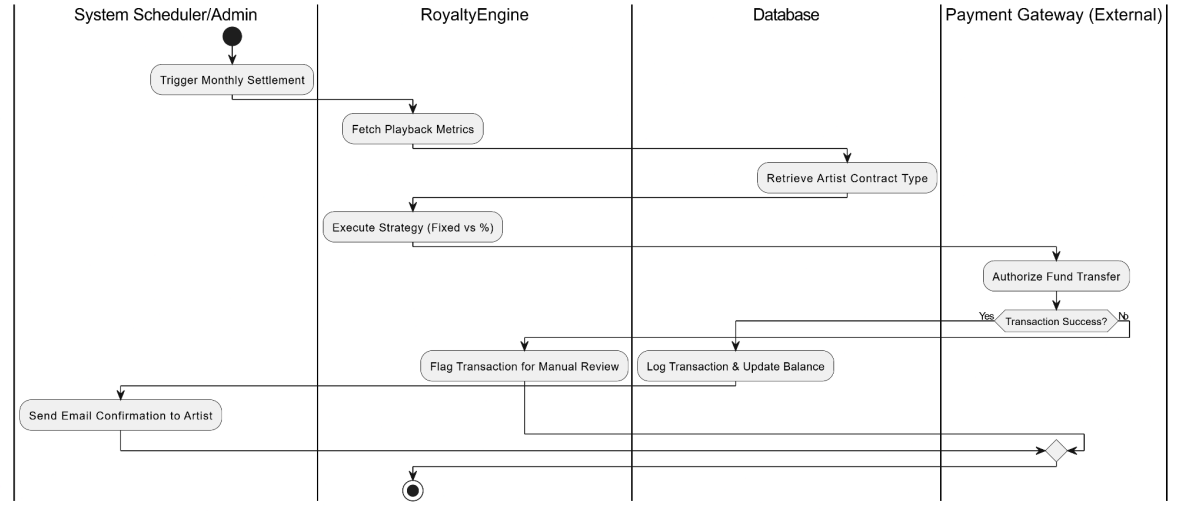
Activity 2: Rights & License Management (Member 2)

Focus: The automated verification of digital rights before granting access.



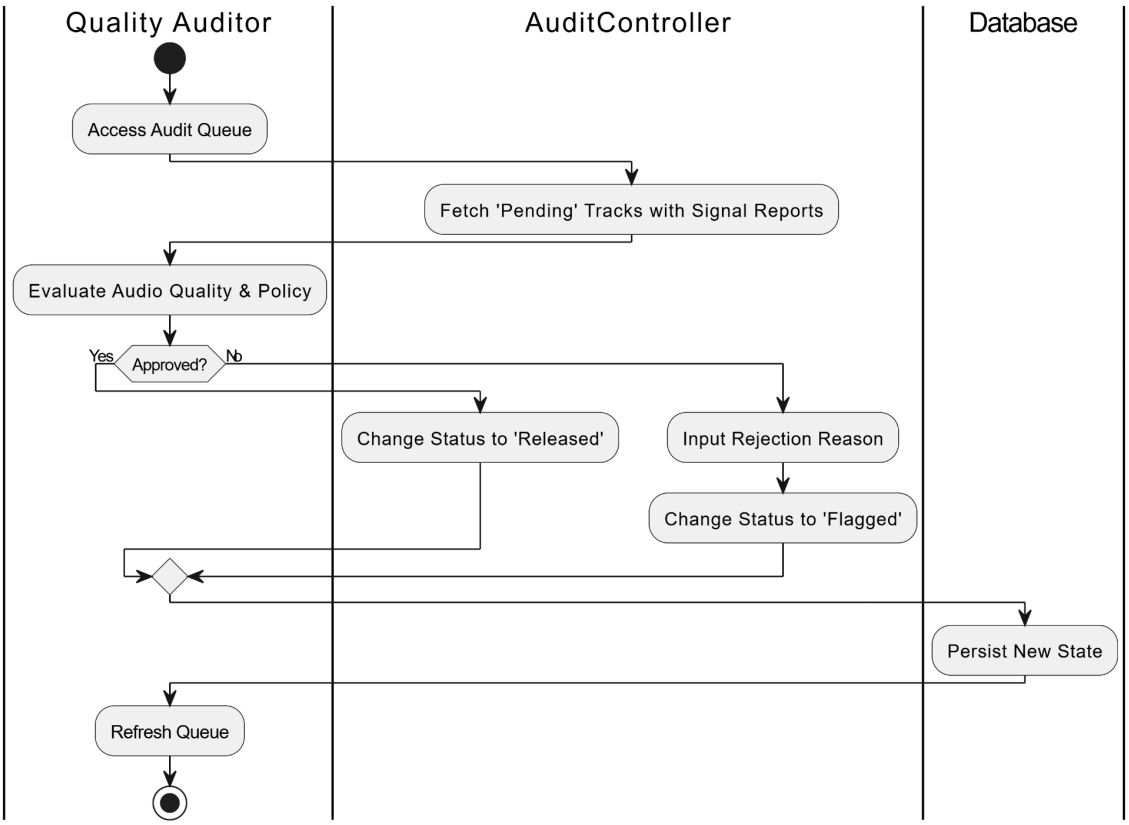
Activity 3: Royalty Calculation (Member 3)

Focus: The interaction with an external Payment API using the **Strategy Pattern**.



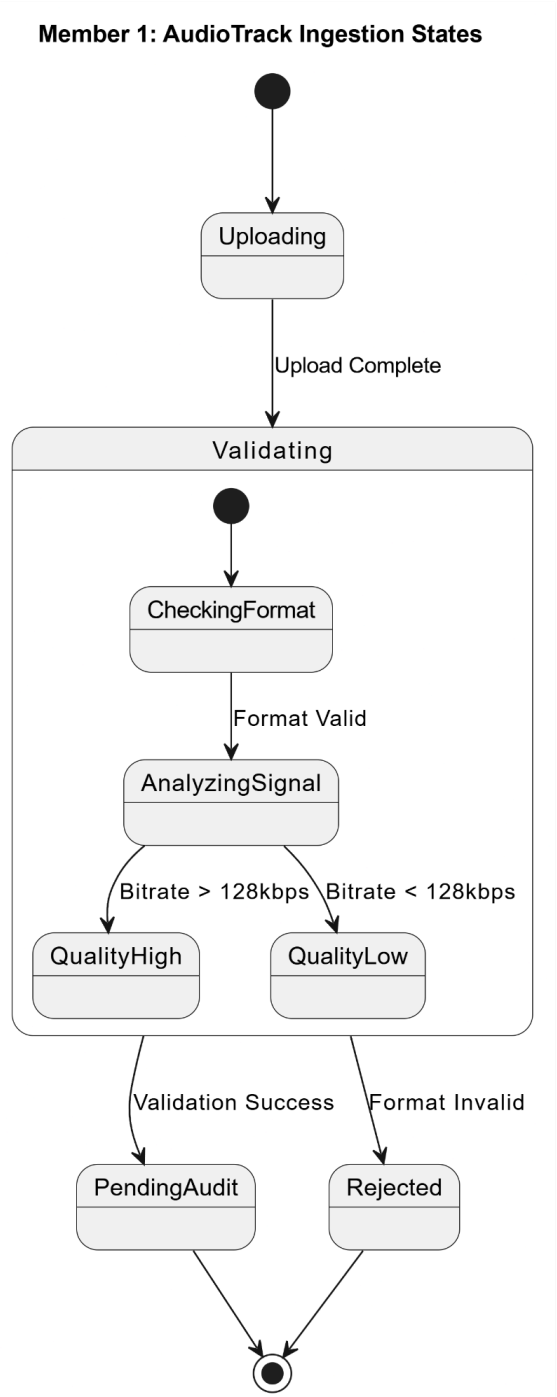
Activity 4: Audit & Approval (Member 4)

Focus: The human-in-the-loop workflow for content moderation.



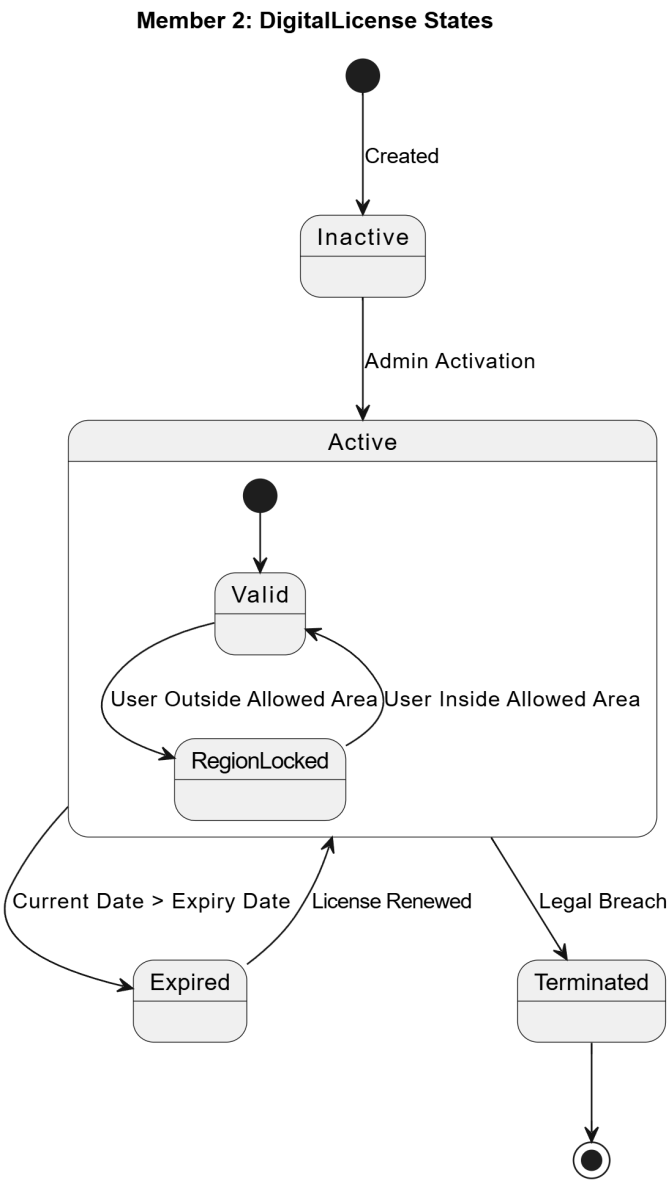
State Diagram 1: Audio Asset Lifecycle (Member 1)

Object: `AudioTrack` This tracks the file from the initial upload through the automated quality check.



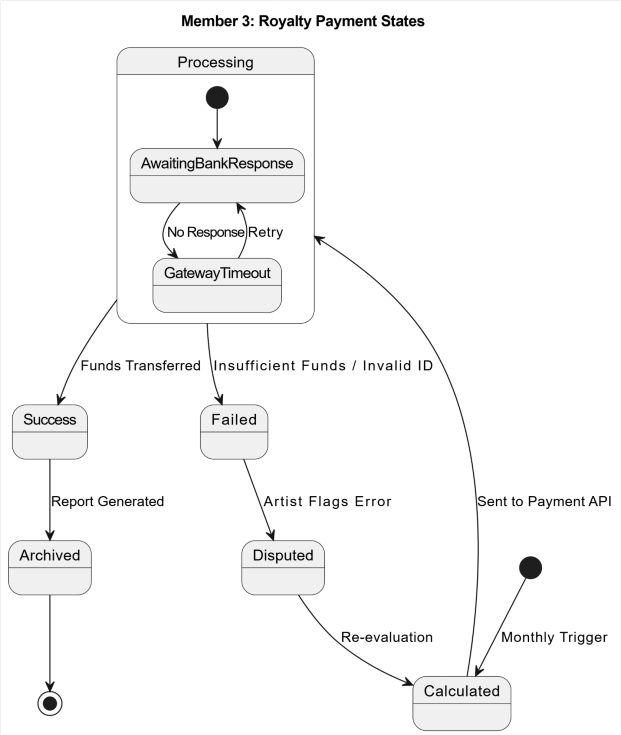
State Diagram 2: License Validity (Member 2)

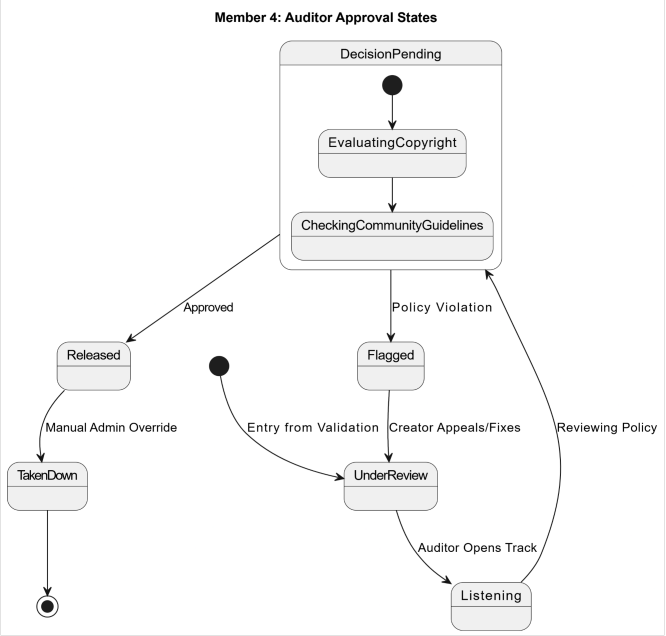
Object: `DigitalLicense` This manages whether a piece of content is legally "Playable" based on time and geography.



State Diagram 3: Royalty Transaction (Member 3)

Object: `PaymentTransaction` This follows the money from calculation to the artist's bank account.



State Diagram 4: Content Approval Status (Member 4)


Object: `ApprovalWorkflow` This tracks the human auditor's decision-making process for the track's public status.
